

Site Development

Sugar Grove Public Works Facility
Sugar Grove, Illinois

Sugar Grove Public Works Facility

Project Features:

- Four-acre site
- 31,500 square feet of building space
- 23 space parking lot
- Truck aprons
- Perimeter fencing
- Access Roads
- Landscaping

The Village of Sugar Grove planned the construction of a public works facility on a 4-acre site in the Sugar Grove Research Park on Wheeler Road. As part of this project, and working closely with the architect, EEI provided land surveying, site engineering and construction services.

EEI completed topographic and boundary surveys as well as the schematic plan based on the architect's concept. A preliminary engineering plan was developed followed by final engineering and creation of construction documents for all site improvements.
