

INTEGRATED INFRASTRUCTURE MASTER PLAN

What is an Integrated Infrastructure Master Plan?

Integrated Infrastructure Master Planning is EEI's coordinated approach to helping municipalities move from separate planning documents and annual project lists to one unified, data-driven capital planning roadmap.

THE CHALLENGE

Is your community planning streets, utilities, stormwater, other community-specific infrastructure, and rates separately? Working in silos leads to missed opportunities.

SEPARATE PROJECTS

Plans don't align

COMPETING PRIORITIES

Resources are stretched thin

MISSED OPPORTUNITIES

Projects aren't coordinated

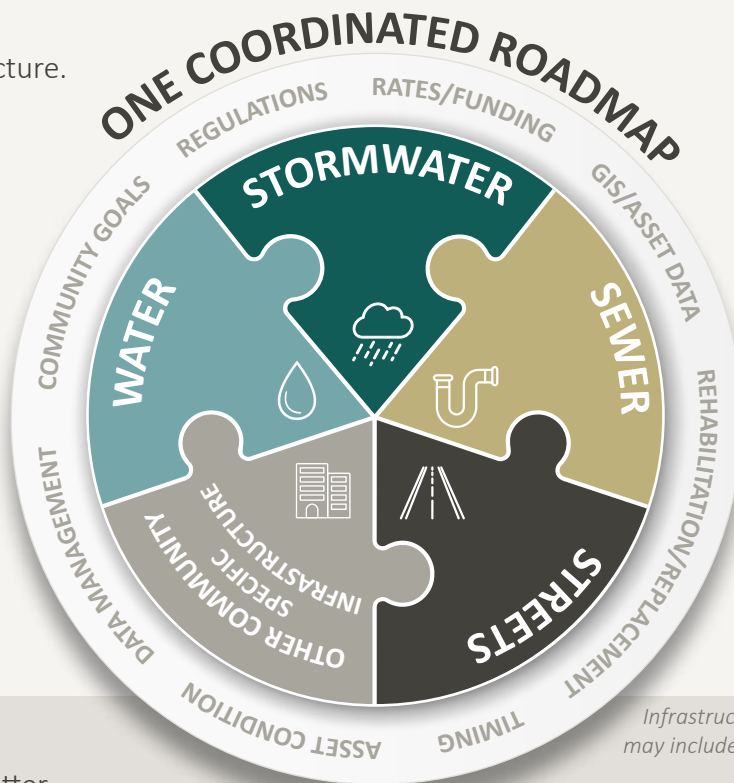

UNCOORDINATED FUNDING

Harder to secure and maximize funding

THE SOLUTION

One plan. Smarter decisions.
Stronger community infrastructure.

An Integrated Infrastructure Master Plan is a holistic planning process that coordinates infrastructure (e.g., Water, Sewer, Stormwater, Streets, and other Community-Specific Infrastructure) planning activities into one unified framework. It helps communities evaluate all infrastructure assets together, identify interdependencies, establish priorities, and develop coordinated implementation strategies.

An Integrated Infrastructure Master Plan is a practical, implementation-focused roadmap that connects a community's infrastructure condition, asset-management priorities, rehabilitation and replacement needs, community development, regulatory obligations, funding strategy, and project timing into one coordinated plan. It helps municipal leaders make smarter capital decisions, reduce redundant construction, stretch limited dollars, and communicate priorities clearly to staff, elected officials, and the public.

Infrastructure asset classes vary by community and may include additional municipal systems and facilities.

THE RESULT

One coordinated roadmap. Better decisions. Better outcomes.

PRIORITIZE

Identify critical infrastructure needs and dependencies

COORDINATE

Align projects, reduce conflicts, and avoid duplication

MAXIMIZE FUNDING

Coordinate investments and align with funding opportunities

PLAN AHEAD

Create a realistic, long-term implementation strategy
